? 1 year ago
pray, isolate, as much as possible. wear mask

? 1 year ago
Nothing you can do now accept prevention of acceleration. Vitamin c and garlic(anti-viral). lots of fluids and healthy diet. I think this is an example of why masks are still a necessary addition to the wardrobe.

? 1 year ago
Forget about the guy - unless you have evidence against him there's nothing you can do and you're only going to stress yourself out being mad at him. Take lots of Vitamin C. (2-3000 mg per day), eat healthy, drink a lot of fluids. If you start to feel sick remember just treat it like a ...[Show more](#)

The machine learning technique developed by Dr. Takemura and team ...

Tumors can be damaging to surrounding blood vessels and tissues even if they're benign. If they're malignant, they're aggressive and sneaky, and often irrevocably damaging. In the latter case, early detection is key to treatment and recovery. But such detection can sometimes require advanced imaging technology, beyond what is available commercially today.

For instance, some tumors occur deep inside organs and

Q&A Services

The screenshot shows the ISTEX website interface. At the top, the browser address bar displays 'istex.fr/rechercher?q=énergie+nucléaire+en+france'. The website header includes the ISTEX logo and navigation icons. The main search area features a search bar with the query 'énergie nucléaire en france' and a magnifying glass icon. Below the search bar, the results are displayed on a dark background. The first result is titled 'Fabrication by H or He ion implantation in lithium niobates and tantalates doped with rare earths and optical characterization'. It includes the authors 'C Mignotte, P Moretti, K E Lipinska-Kalita, G Boulon, J Mugnier', the journal 'Journal of Optics vol.27, page 259 - 264', and a 'Type : Other' label. The second result is 'Réflexions sur le calendrier du débat Énergies et climat', with a summary in French and a 'Type : Research-article' label. The third result is 'Étude des réactions de protons de 400 MeV sur des noyaux de masse moyenne par une expérience de coïncidences proton-gamma', with an abstract in English. On the left side, there are filters for 'Affiner votre recherche' under 'Corpusname' and 'Categories.inist'. The 'Corpusname' filter lists various publishers like Elsevier (1724), Wiley (13), and Sage (8). The 'Categories.inist' filter lists scientific categories like '1 - sciences appliquées, te...' (963) and '2 - sciences biologiques et...' (634).

Popular science: what scientific topics or questions are you interested in?

As a part of the project on science popularisation via text simplification, we invite you to take part in a survey. The aim is to discover the most intriguing scientific questions and notions that deserve to be popularised and easily explained to general public. Together, let's make science more easy and understandable!

Hi there, welcome to our survey on the most intriguing scientific questions that everyone would like to know more about. In the following, you will be asked to provide your general background and to list 3 questions that you would like to ask per each of the following topics:

1. computer science (e.g. ethical issues of artificial intelligence, artificial intelligence and freedom, quantum computing, green machine learning, data protection and privacy, augmented reality, smart city)
2. climate change (e.g. nuclear energy and climate change, digital sobriety, hydrogen vehicles, NINJA generation, carbon footprint)
3. health and society (e.g. covid-19 vaccination, 5G and health).

A note on privacy
This survey is anonymous.
The record kept of your survey responses does not contain any identifying information about you unless a specific question in the survey has asked for this. If you have responded to a survey that used an identifying token to allow you to access the survey, you can rest assured that the identifying token is not kept with your responses. It is managed in a separate database, and will only be updated to indicate that you have (or haven't) completed this survey. There is no way of matching identification tokens with survey responses in this survey.

Part II-IV: Topics per Area

The image displays three overlapping screenshots of a web-based survey interface. Each screenshot shows a browser window with the URL 'dsi-outils.insa-lyon.fr/limesurvey/index.php'. The survey title is 'Popular science: what scientific topics or questions are you interested in?'. The introductory text is: 'As a part of the project on science popularisation via text simplification, we invite you to take part in a survey. The aim is to discover the most intriguing scientific questions and notions that deserve to be popularised and easily explained to general public. Together, let's make science more easy and understandable!'. A progress bar shows 0% completion. A language dropdown menu is set to 'English'. Each screenshot shows a different topic area with a blue header bar: 'Climate Change', 'Computer Science', and 'Health'. Below the header, there is a request for '3 questions/topics' and a list of 'examples'. Each topic area has three text input fields labeled 'Question (topic) 1:', 'Question (topic) 2:', and 'Question (topic) 3:'. At the bottom of each screenshot, there are navigation buttons: '<< Previous' and 'Next >>'. The screenshots are overlapping, with the 'Climate Change' one on the left, 'Computer Science' in the center, and 'Health' on the right.
